## TRAFÖ News: Storage technology underground

In 2018 company Josef Wey AG in Rothenburg, Switzerland invested in a fully automatic sheet metal store made by Trafö. Since space was restricted, a place was created underground. The complete company building was made with basement and an automatic storage system with a length of 30 meters and 7 meters high was installed. In a depth of 8 meters the store has a capacity of 400 bins and 1200 tons. The complete material flow of the store is organized by the automatic vertical conveyor developed by Trafö.

- Combined store for different sizes – 4 x 1,5 and 3 x 1,5 m
- 3000 kg payload per pallet / 1200 tons complete capacity
- Fully automatic provision and transfer by the vertical conveyor
- Input and output station in basement as well as first floor
